

Additional Patent Application Lodged

Highlights

- **Aurora Labs lodged a new patent application in relation to a novel metal powder production process**
- **Powder production is seen as critical to the mass adoption of metal 3D printing technologies for manufacturing**

Aurora Labs Limited advises that it has lodged a new patent application in relation to a novel metal powder production process, being for 'apparatus and method for forming powder'.

Metal powder production is seen as critical to the 3D metal printing industry as the cost of metal powders used in the 3D metal printing process is critical to the cost competitiveness of metal 3D printing compared to traditional metal manufacturing.

The patent is in the provisional patent application stage and has not yet been granted. There is no certainty that it will be granted.
